

# Package ‘ankiR’

January 16, 2026

**Title** Read 'Anki' Flashcard Databases

**Version** 0.2.0

**Author** Christos Longros [aut, cre]

**Maintainer** Christos Longros <chris.longros@gmail.com>

**Description** Read and analyze Anki flashcard collection databases. Provides functions to access notes, cards, and review logs from 'Anki' 'SQLite' database with a tidy interface.

**License** MIT + file LICENSE

**Encoding** UTF-8

**Roxygen** list(markdown = TRUE)

**RoxygenNote** 7.3.3

**Imports** jsonlite, DBI, RSQLite, tibble

**URL** <https://github.com/chrislongros/ankiR>

**BugReports** <https://github.com/chrislongros/ankiR/issues>

**NeedsCompilation** no

`anki_base_path`      *Get Anki base path*

### Description

Returns the default Anki2 directory for the current platform.

### Usage

```
anki_base_path()
```

### Value

Character string path to Anki2 directory

### Examples

```
## Not run:  
anki_base_path()  
  
## End(Not run)
```

`anki_cards`      *Read cards from Anki collection*

### Description

Read cards from Anki collection

### Usage

```
anki_cards(path = NULL, profile = NULL)
```

### Arguments

<code>path</code>	Path to collection.anki2 (auto-detected if NULL)
<code>profile</code>	Profile name (first profile if NULL)

### Value

A tibble of cards

### Examples

```
## Not run:  
anki_cards()  
  
## End(Not run)
```

---

anki\_cards\_fsrs      *Read cards with FSRS parameters*

---

## Description

Read cards with FSRS parameters

## Usage

```
anki_cards_fsrs(path = NULL, profile = NULL)
```

## Arguments

path	Path to collection.anki2 (auto-detected if NULL)
profile	Profile name (first profile if NULL)

## Value

A tibble of cards with FSRS parameters (stability, difficulty, retention)

## Examples

```
## Not run:  
anki_cards_fsrs()  
  
## End(Not run)
```

---

anki\_collection      *Open an Anki collection*

---

## Description

Open an Anki collection

## Usage

```
anki_collection(path = NULL, profile = NULL)
```

## Arguments

path	Path to collection.anki2 (auto-detected if NULL)
profile	Profile name (first profile if NULL)

## Value

An anki\_collection object with methods: notes(), cards(), revlog(), tables(), close()

## Examples

```
## Not run:
col <- anki_collection()
col$notes()
col$close()

## End(Not run)
```

`anki_db_path`      *Get path to Anki database*

## Description

Get path to Anki database

## Usage

```
anki_db_path(profile = NULL, base_path = NULL)
```

## Arguments

<code>profile</code>	Profile name (first profile if NULL)
<code>base_path</code>	Path to Anki2 directory (auto-detected if NULL)

## Value

Character string path to collection.anki2

## Examples

```
## Not run:
anki_db_path()

## End(Not run)
```

`anki_notes`      *Read notes from Anki collection*

## Description

Read notes from Anki collection

## Usage

```
anki_notes(path = NULL, profile = NULL)
```

## Arguments

<code>path</code>	Path to collection.anki2 (auto-detected if NULL)
<code>profile</code>	Profile name (first profile if NULL)

**Value**

A tibble of notes

**Examples**

```
## Not run:  
anki_notes()  
  
## End(Not run)
```

---

anki\_profiles      *List Anki profiles*

---

**Description**

List Anki profiles

**Usage**

```
anki_profiles(base_path = NULL)
```

**Arguments**

base\_path      Path to Anki2 directory (auto-detected if NULL)

**Value**

Character vector of profile names

**Examples**

```
## Not run:  
anki_profiles()  
  
## End(Not run)
```

---

anki\_revlog      *Read review log from Anki collection*

---

**Description**

Read review log from Anki collection

**Usage**

```
anki_revlog(path = NULL, profile = NULL)
```

**Arguments**

path      Path to collection.anki2 (auto-detected if NULL)  
profile      Profile name (first profile if NULL)

**Value**

A tibble of review log entries

**Examples**

```
## Not run:  
anki_revlog()  
  
## End(Not run)
```

*anki\_timestamp\_to\_date*

*Convert Anki timestamp to date*

**Description**

Convert Anki timestamp to date

**Usage**

```
anki_timestamp_to_date(x)
```

**Arguments**

x Numeric timestamp in milliseconds since epoch

**Value**

Date object

**Examples**

```
anki_timestamp_to_date(1368291917470)
```

*anki\_timestamp\_to\_datetime*

*Convert Anki timestamp to datetime*

**Description**

Convert Anki timestamp to datetime

**Usage**

```
anki_timestamp_to_datetime(x)
```

**Arguments**

x Numeric timestamp in milliseconds since epoch

**Value**

POSIXct datetime object

**Examples**

```
anki_timestamp_to_datetime(1368291917470)
```

---

```
fsrs_retrievability
```

*Calculate current retrievability for FSRS cards*

---

**Description**

Calculate current retrievability for FSRS cards

**Usage**

```
fsrs_retrievability(stability, days_since_review, decay = 0.256)
```

**Arguments**

stability	Stability in days
days_since_review	Days since last review
decay	Decay parameter (default 0.256)

**Value**

Retrievability (0-1)
